If required to complete Level 3 monitoring only stop here; otherwise, complete section 2.

Attach plan sheet indicating reference photos. Identify specific problem areas (missing, stressed, damaged or dead plantings): Estimated causes, and proposed/required remedial action: ADDITIONAL COMMENTS: Streambank reforestation was completed in February 2007 and included the following species Type I: black willow and silky dogwood and Type II: sycamore, green ash, northern red oak, river birch, tulip poplar, water oak, and willow oak. Other vegetation noted: Juncus sp., sweetgum, lespedeza, fern, sedge, fennel, pokeberry, Pluchea sp., multi flora rose, and various grasses. The planted vegetation is surviving on the streambank and in the floodplain. NCDOT will continue to monitor the planted vegetation.

Section 2. PLANT SURVIVAL

If required to complete Level 1 and Level 2 monitoring <u>only</u> stop here; otherwise, complete section 3.

Section 3. CHANNEL STABILITY

Visual Inspection: The entire stream project as well as each in-stream structure and bank stabilization/revetment structure must be evaluated and problems addressed.

Report on the visual inspection of channel stability. <u>Physical measurements of channel stability/morphology will not be required.</u> Include a discussion of any deviations from as-built and an evaluation of the significance of these deviations and whether they are indicative of a stabilizing or destabilizing situation.

This is the Year 3 Summer evaluation of the Woodlyn Way Stream Restoration Project. The stream is stabilized for this evaluation. It was noted during this evaluation that a large tree had fell across the stream at Photo Point #4. NCDOT will continue monitoring this stream restoration project.
